EDUCATION

UNIVERSITY OF CEBU - BANILAD
Bachelor of Science in Information Technology, July 2023

EXPERIENCE

Software Engineer | GEMANGO   July 2023 - current
- Fix Drupal, Joomla and Wordpress projects security vulnerabilities by updating their modules, themes, and packages to their latest stable version.
- Worked on the pdf generation feature of Pledgefront and proposed an alternative solution when browsershot didn't work on VPS server.
- Worked on the landing page of Gemango's new website making it highly customizable though ACF custom fields.
- Wrote code on Angular and Laravel using clean code principles; SOLID, DRY, KISS.

Software Engineer Intern | Accenture: Dec 2022 – Jan 2023
- Proactively monitored servers and batch jobs daily to ensure everything is working as expected.
- Communicates with each team members for daily health checklist (DHC) report.
- Sends daily summary reports of servers and DHC to the CIO management team.

QA Engineer Intern | CocoTech Solutions: May 2022 – Oct 2022
- Created test cases and performed user testing for Looptify Android and IOS app as well as Looptify admin panel.
- Performed bug hunting in dev and prod environment and created tickets that were critical for the successful release of each builds.
- Utilized platforms such as Slack to report bugs to software engineers and Jira for managing tickets.
- Received praise from the front-end developer for finding a unique bug.
- I was offered a part time job after my internship.

PROJECTS

PledgeFront (Laravel, Angular, MySQL)
- Worked on the project backend API, frontend blade components and communicated effectively with a 3 member dev team.
- Created project endpoints following restful API best practices.
- Implemented the pdf generation of grant proposals which was used by the client on their email campaigns.
- Handled and completed 6 dev tickets on time.
- Worked on Email Statistics API and Mailgun webhooks
- Worked on the reports front-end UI in Angular

[Gemango](#) (Wordpress, Bootstrap)
- Worked on the landing page and bootstrap nav-walker so that bootstrap styling worked correctly on WordPress built in menu manager.
- Created ACF custom fields to make the website highly customizable to end users.

[GeLink](#) (Laravel, Inertia - React, PostgreSQL)
- A url shortener similar to tinyURL
- With analytics and link management - WIP
